<b>COMMENTS</b>				
1. The facility's approved operational plan states that storm water is diverted away from the active cells. Diversion channels and run-on control channels are placed as necessary as the landfill progresses. Storm water collection ponds are inspected				

annually for capacity and storm water drainage channels are inspected monthly. I inspected records to show that storm water collection ponds and drainage channels were being inspected. Monthly storm water inspections are included on the Butler County Landfill Weekly Field Logs.

2. The facility controls litter through covering waste with daily cover, limiting the size of the working face, use of portable litter fences and picking up trash daily from the surrounding area. Auto fluff and soil were being used for daily cover at the time of the inspection. Fields and ditches along roads surrounding the landfill appeared to be free of litter. Day workers were visible on site at the time of the inspection picking up litter.
3. The facility's approved application states that the site will typically operate 7:00 A.M. to 5:00 P.M. Monday through Friday and 7:00 A.M. to Noon on Saturday; however the operating hours are not limited to those time periods. The facility will increase or decrease the daily hours of operation to accommodate the incoming volume.
4. I emailed Mr. Boyer on August 27, 2020 and requested random load inspections for the weeks of February 3-8, 2020, May 11-16, 2020 and August 3-8, 2020. Mr. Boyer responded via email on August 31, 2020 with all random load inspections conducted for the aforementioned weeks. Mr. Boyer said that random load inspections were conducted every 75 loads. Mr. Boyer provided me with the most recent in-house training documentation which was a waste screening refresher conducted on 7/23/19.
5. Access to the site is controlled by a perimeter fence around the property with gates at all entrance/exit points. Gates are locked except during hours of operation. "No Trespassing" signs are maintained on the perimeter fence.
6. Liquid waste is not accepted unless approved for solidification. BCL's approved operation plan states that the solidification basin consists of a solid waste roll-off container partially buried (see Photo #8). Liquid waste is primarily solidified using fly ash and auto fluff. Mr. Boyer provided me with a report of liquid wastes received for solidification thus far in 2020 and is included in **Attachment 3**.
7. At the time of the inspection, daily cover appeared sufficient on cells adjacent to the active disposal area. Auto fluff and soil were being used as daily cover at the time of the inspection.
8. The following alternative daily covers have been approved for use at the site:
  - Auto Fluff
  - Foundry cupola slag and waste lining cement materials
  - Combination of Auto-fluff and Griffin cupola waste
  - Shredded Tires
  - Petroleum Contaminated Soils
9. Leachate in constructed disposal cells (Cells 1-14) will be maintained at levels less than 12 inches head on the liner due to the gravity-drained design. Each of the sumps in Cells 15-19 will be equipped with a submersible pump and automated head level control system. These pumps will turn on when the leachate within the sump gets near the 12-inch level. Any exceedences will be recorded in the Weekly Field Log.

Leachate is collected into leachate ponds and BCL has been approved for leachate recirculation in the lined cell areas. Mr. Boyer said that leachate recirculation generally occurs by using a sprinkler. Mr. Boyer provided me with a report of leachate recirculated thus far in 2020 which is included in **Attachment 3**. Leachate storage ponds will be inspected weekly and documentation will be made as part of the operating record. I viewed the leachate ponds (see photo 3 & 4) as part of the visual inspection as well as documentation showing that weekly inspections of the leachate ponds had been conducted.
10. Mr. Boyer and I discussed recent odor complaints. Although the Department does not regulate odors, we discussed efforts made by the facility to address the complaints. Although it wasn't required according to Mr. Boyer, he said the facility installed more gas wells for the purpose of capturing more gas rather than having it escape and causing odor. We also discussed the large amount of distillers grain waste being disposed from Alt En. Mr. Boyer said the material did have a strong odor and could have contributed to the odor complaints. I informed him that when the Department received odor complaints, I would continue to contact him and have him respond with potential reasons which may be contributing to stronger odors at that time.

<b>COMMENTS</b>					
1. NDEE has received quarterly gas monitoring results from BCL for 2020 - most recently the 2nd Quarter 2020 Landfill Gas Monitoring Report was received on May 8, 2020. Methane was not detected at applicable building/structure sampling locations or at perimeter gas probes at or above regulatory limits (1.25% by volume and 5% by volume, respectively).

<b>COMMENTS</b>					
1. NDEE has received semi-annual groundwater monitoring results – most recent on July 31, 2020 for the first half 2020. During the visual inspection of the facility, I conducted spot checks of groundwater monitoring wells which appeared to be locked and in good condition and included viewing the new groundwater monitoring well P-26 (see photo 2).

001	Written determination from Department for special waste received	1			
<b>COMMENTS</b>					
1. NDEE provided a written determination on 8/7/19 allowing windmill blades to be managed as a special waste with exceptions for handling the blades. This allowance ended on 12/31/19 and Mr. Boyer said they have not received any blades to his knowledge in 2020.

**COMMENTS**

- Yard waste is allowed to be accepted year round since it is used for the production and recovery of methane gas for use as a fuel. Waste tires are allowed to be accepted at the facility for processing and use as an ADC.

**Subject:** NDEE Upcoming Inspection

WARNING: This email is from outside of Waste Connections. Exercise caution.

Ryan,

Due to Covid-19, NDEE is notifying facilities prior to conducting inspections instead of showing up unannounced. The purpose of this email is twofold:

1. To inform you that I plan to conduct a solid waste inspection at the Butler County Landfill on Wednesday September 2, 2020.
2. To request documents electronically instead of an onsite review to limit contact while onsite. Although some documents will have to be reviewed onsite.

I would like to request you to email with the following documents....sometime prior to the inspection date (9/2/20) if possible.

- Documentation to show that storm water collection ponds are inspected annually for capacity and storm water drainage channels are inspected monthly.
- Random Load Inspections – please provide me with all random load inspections conducted during the weeks of February 3-8, 2020, May 11-16, 2020 and August 3-8, 2020.
- Copies of training documents for all individuals that have conducted random load inspections in 2020 to show they have been trained to recognize hazardous waste.
- A report showing Liquid Waste Solidification thus far in 2020...i.e....liquid waste received.
- A report of leachate recirculated thus far in 2020.
- Documentation to show that leachate storage ponds are inspected weekly – please provide documentation for the weeks of January 13-18, 2020, April 6-11, 2020 and July 6-11, 2020.
- Report of asbestos loads received thus far in 2020.
- A list of the number of loads of waste brought from Alt En of distillers grains (wet cake) as well as a total amount (We can discuss further when I'm there).

I realize this is a lot of information but it is information I would typically ask for while on site during a normal inspection anyways.

We'll discuss other landfill operations as usual at the time of the inspection and conduct a visual inspection as well.  
Let me know if you have any questions, otherwise we'll see you next Wednesday.
